se2thesis – A Thesis Class for the Chair of Software Engineering II at the University of Passau, Germany*

Stephan Lukasczyk[†]

Released 2023-07-04

Abstract

One can choose from a wide variety of templates to write a thesis. Many universities provide very rigorous style guides and force their students to obey to those guides, even though they might be questionable from a typographics point of view. Other universities do not provide such guides and leave it to their students to choose or come up with a template. The latter is causing very differently-looking theses. To avoid such a situation in the future this bundle combines several LATEX packages and classes for the use at the Chair of Software Engineering II at the University of Passau. We provide, among others, a document class for theses that shall be used by our students. The bundle is designed in a way that one can use the basic components as standalone packages to allow their reuse for other projects.

Part I

User Documentation

The first part of this file provides the documentation for the user of the se2thesis bundle. We provide the implementation in the second part of this document, starting at page 15, for those who are curious.

1 Introduction

The University of Passau does not provide a common thesis template to its students. For theses, written at the Chair of Software Engineering II, many students chose between two templates that were provided by different people from the chair; other students chose from the large variety of templates available from the internet, causing each thesis looking differently.

The author of this package provided a template, which he initially created for his bachelor and master thesis, that was recommended and used by many students. The implementation of that template, however, was very hacky and required some changes over time. This lead to the idea of creating a new template from scratch, that shall be used by all our students for their various types of theses, from bachelor to PhD level. The result is the se2thesis bundle.

The bundle itself consists of several LATEX classes and packages that also allow reuse of various parts of it. Its main class is the se2thesis document class, an extension of the KOMA-Script scrreprt document class. The packages se2colors and se2fonts provide necessary colour and font settings for the se2thesis class. They are available as separate packages, however, to allow their reuse for other classes, packages, and projects, as well.

1.1 Installation

The se2thesis bundle is available from CTAN¹. It is part of both MiKT_EX and T_EXLive. You can find its development version from GitHub². The easiest way of installing it is through your T_EX distribution; please check your distribution's documentation on this. Note that it might be necessary to update your T_EX distribution because they might not provide you updates; for example, there is a new version of T_EXLive every year which needs to be installed separately. If you have installed an older version of se2thesis consider updating it to the latest version available from CTAN through your distribution.

For manual installation, we recommend to clone the Git repository and run the 13build tool that we also use for building the bundle. Running 13build ctan builds the source files and compiles the documentation. This creates a folder build containing these artefacts; build/doc contains the documentation, build/local the source files. See the documentation of 13build and your TeX distribution on how to install them manually. Please note that 13build also provides a 13build install target to install the bundle files to your local texmf tree.

The "Island of TEX" project provides Docker images of TEXLive. If you do not want to install/update TEXLive on your system you might want to consider their latest image, which contains a recent TEXLive 2023 build. They build their images weekly, thus also recent releases of se2thesis will be part of the image soon after their release date.

¹ctan.org/pkg/se2thesis

²github.com/se2p/se2thesis

General Macros

They all have in common one macro, \IfformatAtLeastTF; this macro is part of the latest LATEX kernel. However, not all users might have upgraded their TEX installation to a level using a recently-enough kernel version. Therefore, every class and package of this bundle will conditionally define the following macro:

```
\IFFormatAtLeastTF \setminus IfFormatAtLeastTF \{\langle version \rangle\} \{\langle then block \rangle\} \{\langle else-block \rangle\}
```

Checks whether the used LATEX format is at least the one from the given date value. The date needs to be specified either in YYYY/MM/DD or in YYYY-MM-DD format.

2 License

Permission is granted to copy, distribute, and/or modify this software under the terms of the LATEX Project Public License (LPPL), version 1.3c or later (https://www.latexproject.org/lppl.txt). The software has the status 'maintained'.

3 The se2thesis class

The se2thesis class is the central component of this bundle. It provides a wide variety of settings, mostly regarding the title page (see Section 3.2) and the type area (see Section 3.3).

We aim to keep the se2thesis class relatively small, especially considering packages that we load. Currently, the class itself loads the se2colors (see Section 4) and se2fonts (see Section 5) packages. The following packages and classes are loaded: expl3, l3keys2e in case one uses a IATEX kernel from before 2022-06-01, graphicx, translations, KOMA-Script, xcolor, ifthen, as well as fontspec, unicode-math, and libertinus-otf if one uses LuaTFX; for pdfIATFX we load fontenc, libertinus-type1, and AnonymousPro instead of the latter three. Furthermore, we load microtype; when using LuaT_FX, we also load lua-widow-control and selnolig.

However, we recommend to use a couple of further packages, together with some further options to those package. We describe these settings in Section 6. Please consider looking at this section when starting to write your document.

Before we start with a detailed documentation of the class, we explain one helper macro that can be used to check whether a package has been loaded.

```
\slightharpoonup \slcd_package_if_loaded:n\overline{TF} *
```

Updated: 2022-09-27

Checks whether a package has been loaded and conditionally executes code.

Load-time options 3.1

The se2thesis class defines several load-time options, all of them optional, on top of the options provided by the KOMA-Script document classes.

```
class class = \langle choice \rangle
```

Set the base document class. Values are scrreprt, scrartcl, or scrbook. Default is scrbook.

paper paper = \langle choice \rangle

Set the paper format. Possible values are a4 or b5. Default is a4.

logofile logofile = $\{\langle path-to-file \rangle\}$

Defines the path to the University's logo for the title page.

thesistype thesistype = $\langle choice \rangle$

Defines the type of the thesis. Possible values are: bachelor for a bachelor thesis, bachelorproposal for a proposal to a bachelor thesis, master for a master thesis, masterproposal for a proposal to a master thesis, phdproposal for a proposal to a PhD thesis, and phd for a PhD thesis.

colormode colormode = \langle choice \rangle

Select the color scheme used by the automatically loaded se2colors package, see Section 4 for a description.

fontmode fontmode = $\langle choice \rangle$

Updated: 2023-01-10 Select the font scheme used by the automatically loaded se2fonts package, see Section 5 for a description.

This option is deprecated and will be removed in the future!

3.2 The title page

Designing a title package for a thesis can be complicated. There might be some requirements that are not obvious to the user, especially considering the positioning of elements. The University of Passau, for example, requires the logo to be positioned on the top right of a page; theses—especially PhD theses that shall be published through the University's library system—could be rejected from publication by the library until this is fixed.

We thus redeclare the standard $\mbox{\tt maketitle}$ macro from $\mbox{\tt KOMA-Script}$ and customise it to our needs.

\@maketitle \@maketitle

We override the definition of the \@maketitle macro for our needs.

In addition to the macros provided by the KOMA-Script classes for the title-page values (e.g. \author, \title, we provide some further macros that can be used. Setting values to these macros is optional in any case, if they are not set, the corresponding value is not put to the title page.

\version \version $\{\langle \mathit{version} \rangle\}$

Specify the version of the document. This can, for example, be a git hash of the current version.

 $\degreeprogramme \degreeprogramme \{\langle programme-name \rangle\}$

Specify the degree programme the thesis is meant to be accepted in. Possible values are, among others, 'Informatik' if you are writing your thesis in German, or 'Computer Science' if you are writing the thesis in English.

\matrnumber

\matrnumber $\{\langle matriculation-number \rangle\}$

Specify the matriculation number of the student writing the thesis. This is required for Bachelor and Master theses.

\supervisor \cosupervisor

\supervisor $\{\langle name \rangle\}$ \cosupervisor $\{\langle name \rangle\}$

Specify the name of your supervisor and co-supervisor. Both people usually are professors.

\advisor \coadvisor

\advisor $\{\langle name \rangle\}$ \coadvisor $\{\langle name \rangle\}$

Specify the name of your advisor and co-advisor. Both people usually are PhD students

\institute

\department \department $\{\langle name \rangle\}$

\institute $[\langle short-name \rangle]$ $\{\langle name \rangle\}$

Specify the department and institute. The department is, for example, 'Faculty of Computer Science and Mathematics', the institute, for example, 'Chair of Software Engineering II'. If the \department value is not specify, we use 'Faculty of Computer Science' as the default value for English theses and 'Fakultät für Informatik und Mathematik' as the default value of German theses.

\external \external $\{\langle name \rangle\}$

Specify the name of an external referee.

\location \location $\{\langle name-of-town \rangle\}$

Specify the name of your residence town for the signature field.

To define the path to the logo graphics we require a different workflow: We do not bundle logo graphics with this package due to legal restrictions. They can be downloaded from the University's website; please note that the website for downloading the logo graphics is only accessible from within the University's campus network or a VPN connection. To specify the path to the logo graphics, we provide a load-time option to the se2thesis class called logofile (see Section 3.1).

When printing the thesis in two-side mode—which we recommend—the back of the title page again denotes author and title on the bottom.

\@lowertitleback \l@lowertitleback

Override this internal macro of KOMA-Script to print this information on the back side of the title page.

Additionally, we provide some interal rewritings to standard macros from KOMA-Script that allow to automatically split authors using the \and command.

\author \@author

\author $\{\langle author \rangle\}$

We rewrite the definitions of \author and \@author to do this splitting automatically. Additionally, this also adds a correctly translated version of 'and' between the author names if required.

Type-area settings

The se2thesis class manipulates the type area compared to the default settings of the KOMA-Script classes. Our settings are inspired by the classicthesis package, which itself is inspired by the style used by famous statistician Edward Tufte. We provide predefined settings for DIN-A4, DIN-A5, and DIN-B5 papers. If you need settings for other paper sizes, please open an issue on this package's GitHub repository (https://github.com/se2p/se2thesis) and we will happily include those settings in a future release of this bundle.

Additionally, we are setting the page footer in a way that it contains the page numbers in the outer margin and the headmarks split from the page numbers by a vertical bar.

3.4Abstract for the thesis

Each thesis shall come with an abstract that summarises its content. The abstract should be written in the language the thesis is written in. Additionally, there is the requirement to provide a German abstract if the thesis is written in a foreign language.

\abstract \abstract

We ensure that the \abstract command is defined for all document classes.

abstract (env.)

To typeset an abstract, we provide an environment called abstract. The environment takes an optional argument that specifies the language that is used in this abstract. Setting the abstract's language will cause its title to change to the respective language; additionally, hyphenation is also changed for that language.

\begin{abstract}[language] Your abstract text. \end{abstract}

Acknowledgements 3.5

acknowledgements (env.) We provide the acknowledgements environment to typeset acknowledgements for your thesis. Using this environment is optional. Usually, bachelor and master thesis do not contain such an acknowledgements section, however, there is no general rule to this.

> \begin{acknowledgements}[language] Your acknowledgements. \end{acknowledgements}

3.6 Document structuring

A larger work, such as a thesis, is usually structured in three large blocks: a frontmatter that provides all the overview, such as abstract, table of contents, etc., a mainmatter that contains all the actual content, and a backmatter for appendices. se2thesis ensures that the following macros are defined because they are not provided by all KOMA-Script classes.

\mainmatter \backmatter

\frontmatter \frontmatter \mainmatter \backmatter

> Switches between frontmatter, mainmatter, and backmatter. Most notably, the frontmatter will have roman page numbers, while the other two will have arabic page numbers.

3.7 Authorship declaration

The University of Passau requires its students to provide an authorship declaration as part of their thesis for submission. They provide a template form, which would not fit the style of the se2thesis class. Thus, we provide the \authorshipDeclaration macro to typeset such a declaration. It uses the original (German) text of the declaration and fills in the values that are specified by the \author and \location macros.

\authorshipDeclaration \authorshipDeclaration

Print the authorship declaration text.

Please note: the authorship declaration will always be printed in German, no matter what the language of the thesis is. This happens due to legal requirements. In order to make this work, you have to load the babel or polyglossia package in a way that it also supports German hyphenation. For example, use

\usepackage[ngerman,main=UKenglish]{babel}

for a thesis with traditional English³ as its main language and support for German.

 $\signatureBox \signatureBox [\langle width \rangle] \{\langle signature-name \rangle\}$

A helper macro to print the signature box for the authorship declaration. The optional argument $[\langle width \rangle]$ allows to specify a custom width for the signature line. The default is 5 cm. The mandatory argument $\{\langle signature-name \rangle\}$ specifies the name of the signee, which will be typeset below the signature line.

3.8 Research Questions and findings summaries

Most these written at our Chair will require the student to provide some empirical evaluation of their work to shed insights whether their proposed ideas are actually useful. For an empirical study, one needs to specify research questions and maybe also hypotheses. The se2thesis class supports this by providing environments for this.

resq(env.)

The resq environment shall be used to specify a research question.

hyp (env.)

The hyp environment shall be used to specify a hypothesis.

summary (env.)After describing the results, we recommend to give an explicit summary of the findings for a research question or hypothesis. This summary shall be given in one or two sentences. The summary environment provides a convenient way for this; it will be typeset in a highlighted box that is easy to spot and also allows readers of the work to quickly

grasp the main findings.

\begin{summary}{label-reference}

The summary text itself.

\end{summary}

³there is a nice, probably photoshopped, picture of a Steam setup dialogue stating that American English is a 'simplified version' of British English, see https://jakubmarian.com/is-american-englishsimplified-and-british-english-traditional/.

The environment expects as a parameter a label, for example, to a research question; however, this can also be arbitrary text.

4 The **se2colors** package

Several colours are specific to the university and we want to have a comprehensive interface to access them throughout all our packages.

The se2colors package provides this exact features. One can load it using \usepackage{se2colors} in the document preamble.

 $\verb|cmode| = \langle \textit{choice} \rangle$

Updated: 2022-11-03 Selects the colour mode that shall be used for creating the results, a choice from the options specified in Table 1. The default setting is 4C.

Table 1: Options provided by se2colors.

Option	Description
cmode=4C cmode=CMYK CMYK, cmyk	Define colours in CMYK colour space (default). Alias for the previous. Aliases for the previous.
cmode=RGB RGB, rgb	Define colours in RGB colour space. Aliases for the previous.
cmode=BW	Define colours in black-and-white colour space.
cmode=1C gray	Alias for the previous. Alias for the previous.

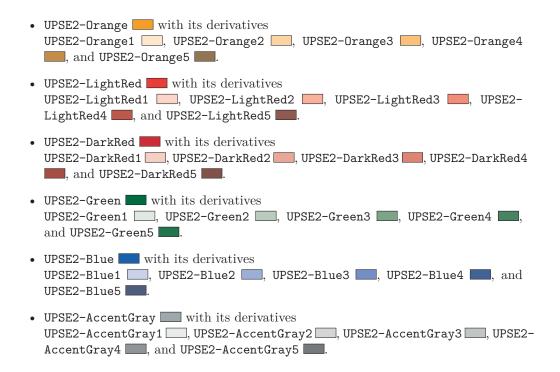

We define two basic colours that are taken from the University's logo, namely UPSE2-Gray and UPSE2-Orange.

Additionally, we define four colours for the four faculties of the University:

- the Faculty of Law UPSE2-JUR _____,
- the School of Business, Economics and Information Systems UPSE2-WIWI
- the Faculty of Arts and Humanities UPSE2-PHIL _____, and
- the Faculty of Computer Science and Mathematics UPSE2-FIM

Finally, we define a full set of supplementary colours:

- UPSE2-DarkGray with its derivatives
 UPSE2-DarkGray1 , UPSE2-DarkGray2 , UPSE2-DarkGray3 , UPSE2-DarkGray4 , and UPSE2-DarkGray5 .
- UPSE2-White with its derivatives
 UPSE2-White1, UPSE2-White2, UPSE2-White3, UPSE2-White4, and UPSE2-White5.
- UPSE2-LightGray with its derivatives
 UPSE2-LightGray1 , UPSE2-LightGray2 , UPSE2-LightGray3 , UPSE2-LightGray4 , and UPSE2-LightGray5 .

The **se2fonts** package

The se2fonts package sets the fonts of the document. In the first version of the bundle, we were running to use Hermann Zaph's Palatino, Helvetica, and Neo Euler fonts. However, we figured out that they are not part of a standard IATEX installation, and thus required manual work by the user to install them. Furthermore, loading the fonts did not always work in a correct way.

Thus, we decided to rethink this decision and—as a consequence—now use different fonts that are part of a recent standard LATEX installation: we use the *Libertinus* fonts⁴ for serif, sans-serif, and math typesetting and the Anonymous Pro font⁵ as a monospaced font.

Please note: this change might affect they way your documents look, and also might affect paragraph and line breaks!

If you are using LuaT_FX, fonts are expected to be present as open-type fonts; using pdfIAT_EX will fallback to Type-1 fonts.

Please note: the package does not support X_TT_EX!

The following options are defined by the se2fonts package to influence the selection of the fonts.

fmode

fmode = \langle choice \rangle

Updated: 2022-11-03 The argument is deprecated and will raise a warning. It is to be removed by a future version of the se2thesis bundle.

The following list provides examples for each of the fonts:

- An example text in Libertinus Serif
- An example text in Libertinus Sans
- An example text in Anonymous Pro

The package provides additional helper functions that are also available to the user.

\pdftexengine \pdftexengine \xetexengine \xetexengine \luatexengine \luatexengine

> These commands alias the built-in LATEX3 macros \sys_if_engine_pdftex_p:, \sys_if_engine_xetex_p:, and \sys_if_engine_luatex_p:. They can be used to check which engine the user is currently running.

```
\verb| \ifengineTF \| \{\langle engine \rangle\} \| \{\langle then \| block \rangle\} \| \{\langle else \| block \rangle\} 
                      \ifengineT \{\langle engine \rangle\}\ \{\langle then\ block \rangle\}
\ifengineT
\ifengineF
                      \ifengineF \{\langle engine \rangle\} \{\langle then block \rangle\}
```

Allows to execute code based on the running engine. The base variant \ifengineTF expects the user to specify a condition, which can be built of combinations of the \pdftexengine, \xetexengine, and \luatexengine macros, followed by the code that will be executed if the condition holds and the code that will be executed if the condition does not hold.

For convenience, we provide the variants \ifengineT and \ifengineF that allow to omit an empty then or else branch, respectively.

⁴https://github.com/alerque/libertinus

⁵https://www.marksimonson.com/fonts/view/anonymous-pro

6 The se2packages package

Several packages can be useful for writing a thesis. We provide a simple package for the user that loads these support packages with the recommended options. Please note that you might not need all these packages, however, having a look at them (especially their documentation) might give you an insight whether to use a certain package. Our general recommendation is to use as few packages as you can; some might have conflicts, others basically do the same, or are outdated. Please consider reading the documentation of each package you are using to figure out whether they have any conflicts with other packages (for example, one cannot use the recommended siunitx package together with Slunits) or they might require to be loaded at special places in your preamble (for example, hyperref is usually meant to be loaded as the last package, except you are also using cleveref, which needs to be loaded after hyperref).

6.1 The Recommended Packages

We first present the packages we recommend and give a rationale why we believe they should be used. Afterwards, we will discuss how to load the se2packages package to use one or the other of these recommended packages in the next section.

6.1.1 Quoting with csquotes

The csquotes packages allows you for intelligent quoting of text. While verbose quotes are not that common in computer science, the package still provides some useful macros to the user.

6.1.2 Number formatting with siunitx

While siunitx's original purpose was to format physical quantities, it provides a lot of useful features when typesetting theses (and other documents) in computer science. When you skim through its documentation, especiall look at the \qty and \num macros, as well as the section on typesetting tabular material. We also recommend reading an extensive discussion on number formatting, precision of presented numbers, and more related topics in Beyer et al.'s journal paper on requirements and solutions for reliable benchmarking [1].

6.1.3 Code Listings

We prefer using the minted package for code listings because it provides a lot of options for styling as well as built-in support for a huge number of languages. However, this package requires the installation of Python and the setting of the -shell-escape option to your TEX engine. Please read the package's documentation to set it up; the aforementioned Docker images from the Island of TEX project provide you everything set up already.

In case you do not want to use the minted package, please consider using listings for typesetting your code listings.

Please be aware to use *either* minted *or* listings!

6.1.4 Designing Tables

A basically mandatory package to all users of tables is the booktabs package. Especially its documentation is a must-read! It provides a large variety of hints for designing tables, most notably that one should never ever use vertical lines; horizontal lines should be used sparesly; booktabs provides three macros for lines that shall be used instead of \hline from standard IATEX: \toprule for a rule on the top of a table, above the column heads; \midrule to separate column heads and the content, and \bottomrule to mark the bottom of a table. We highly recommend that you follow this style when writing your thesis.

Note that captions of tables shall be put *above* the table whereas captions of figures shall go *below* the figure. The rationale is that a figure should be more or less self explaining while a table almost always needs some explanation.

Unfortunately, the distances when using a \caption above a table are wrong by default; when creating tables, consider loading the hvfloats package and use its \tabcaption instead of \caption for tables. The hvfloats package furthermore provides additional useful macros to typeset all kinds of floats.

6.1.5 Controlling Ligatures, Orphans, and Widows

When using LuaTEX (which we recommend anyway), we additionally recommend to use the selnolig and lua-widow-control packages. The former implements a better control over ligatures, the latter provides better control over orphans and widows.

For some reason we were not yet able to fix properly, lua-widow-control works on some machine but fails on others, although they are using the same version of TeXLive. We therefore deactivate lua-widow-control by default.

6.1.6 Use microtype for Microtypographic Optimisation

microtype is a game changer when writing documents. While standard LATEX provides reasonably good typography, the microtype package brings it to the next level. We refer you to the documentation of the package for details.

Additionally, we prefer to have a thin space around the m-dash. Although we are aware of the discussion whether to have such a space in English, we think it looks more beautiful and thus recommend it.

6.1.7 Use biblatex for Bibliographic References

The standard way of typesetting bibliographic references used to be BibTeX. The original BibTeX, however, seems to be very outdated in various ways: it originally only supported 7 bit character sets and creating citation styles requires the usage of a kind of an archaic language. BibLaTeX resolves many of the drawbacks of BibTeX; when combined with the biber engine, it supports full UTF-8 unicode, therefore correct sorting of the references now works out of the box; also creating citation styles can now be done using simple IaTeX commands.

6.1.8 Use cleveref for Internal References

IATEX provides an easy-to-use reference mechanism using the \label and \ref macros. However, this requires some manual effort and the text needs to specify whether a reference is to a figure, section, or table. We often see in drafts artefacts such as 'we discuss our findings in 4'; but what is '4' here? Is it a section? A table? A figure?

To avoid such confusion, use the cleveref package, which automatically infers the type of the reference (see its documentation on how this works). The cleveref package furthermore avoids an additional, common mistake: between the name of the element and its reference one needs to have a non-breaking space that is often forgotten. Instead people are using normal spaces that can break at the end of a line which looks very ugly.

Please note that, in contrast to most other packages, cleveref has to be loaded after the hyperref package!

6.2 Loading se2packages

When you load the se2packages package it will automatically load the csquotes and booktabs packages because we believe that you definitely should use them. Still, it is possible to avoid this by setting the following load-time options to the package.

csquotes csquotes =
nocsquotes nocsquotes

csquotes = $\langle true, false \rangle$

The argument to csquotes can be one of true or false. The latter does not load csquotes, the former is the default value. By using nocsquotes you can also avoid that csquote is loaded.

booktabs

booktabs = $\langle \mathit{true}, \mathit{false} \rangle$

nobooktabs nobooktabs

The argument to booktabs can be one of true or false. The latter does not load booktabs, the former is the default value. By using nobooktabs you can also avoid that booktabs is loaded.

The siunitx package is helpful to set quantities and to automatically format numbers consistently. The following load-time option loads it automatically.

siunitx siunitx = $\langle true, false \rangle$

Decides whether the package loads siunitx and sets the options for siunitx to the values we recommend. The default value is false, set it to true to load siunitx.

We provide a load-time option to load minted and configure it.

 $\verb|minted minted = \langle \textit{true,false} \rangle|$

Decides whether the package loads minted and sets the options for minted to the values we recommend. The default value is false, set it to true to load minted. Note that minted requires additional installation effort and the use of the -shell-escape option, see its documentation.

We also provide a load-time option to load listings and configure it. This option and the minted option are mutually exclusive!

listings listings = $\langle true, false \rangle$

Decides whether the package loads listings and sets the options for listings to the values we recommend. The default value is false, set it to true to load listings.

We provide a load-time option to load selnolig.

selnolig = $\langle true, false \rangle$ selnolig noselnolig noselnolig

The argument to selnolig can be one of true or false. The latter does not load selnolig, the former is the default value. By using noselnolig you can also avoid that selnolig is loaded.

We provide a load-time option to load lua-widow-control.

widowcontrol nowidowcontrol nowidowcontrol

$\verb|widowcontrol| = \langle \textit{true}, \textit{false} \rangle|$

The argument to widowcontrol can be one of true or false. The former loads luawidow-control, the latter is the default value. By using nowidowcontrol you can also avoid that lua-widow-control is loaded.

We provide a load-time option to load and configure microtype.

microtype nomicrotype nomicrotype

 $microtype = \langle true, false \rangle$

The argument to microtype can be one of true or false. The latter does not load microtype, the former is the default value. By using nomicrotype you can also avoid that microtype is loaded.

We provide a load-time option to load and configure biblatex.

biblatex biblatex = $\langle true, false \rangle$

Decides whether the package loads biblatex and sets the options for biblatex to the values we recommend. The default value is false, set it to true to load biblatex.

Additionally, we provide a load-time option to load cleveref. This option makes use of IATEX's hook system to load it as the very last thing in the preamble. You shall not use this option, but load cleveref on your own, if your document requires packages that need to be loaded even after cleveref.

cleveref cleveref = $\langle \mathit{true}, \mathit{false} \rangle$

Decides whether the package load cleveref. The default value is false, set it to true to load cleveref.

Lastly, we provide one option to load all recommended packages (with minted prefered over listings).

all all = $\langle true, false \rangle$

Decides whether the package loads all recommended packages. The default value is false, set it to true to load them.

6.3 Additional Recommended Packages

The following packages are not part of se2packages because they serve a very specific purpose. They might not be needed by many thesis writers, however, we mention them here in order to give you a pointer. We list them in alphabetic order.

• algorithm2e: provides tooling for typesetting algorithm diagrams. We recommend loading it with the following options:

\usepackage[ruled,noline,noend,linesnumbered]{algorithm2e}

- hvfloat: a package to control captions, fullpage, and double-page floats. We recommend to load it and use its \tabcaption for table captions.
- lettrine: allows to start a paragraph with a large initial. This is a beautiful opener for the first paragraph of a thesis' main content.
- mathtools: an enhanced version of the famous $\mathcal{A}_{\mathcal{M}}\mathcal{S}$ mathpackage that provides more functionality and fixes some of the known bugs.
- pdfx: adds support for PDF/X and PDF/A, which is useful for creating documents that can be archived, for example, by the University's library.
- pgfplots: a library for creating all kinds of plots, based on pgf, which is also the basis of the tikz package.
- sidenotesplus: a package to place all kinds of objects in the margin of a document, from footnotes (then called sidenotes) to figures and tables.
- subcaption: support for sub-captions and sub-figures.
- tabularray: a rewrite of LATEX's array and tabular abilities in LATEX3. While the package offers a great combination of several other packages' functionality, it tends to be quite slow for large tables due to the way it is implemented internally.
- tcolorbox: allows to typeset coloured boxes, for example, for short summaries on research questions or hypotheses.
- tikz: for creating all kinds of figures. Beware: TikZ is a really huge package with a lot of functionality and a manual of more than 1300 pages.

Part II

Implementation

The second part of this file provides the implementation of the package for a better understanding of what is happening.

1 Global helpers

These helpers might be useful for many exported packages and classes, thus we keep them on the global level of this implementation.

```
1 \( \*init \)
Load only the essential support (expl3) 'up-front', and only if required.
2 \( \@ifundefined{ExplLoaderFileDate} \)
3 \( \{ \RequirePackage{expl3} \} \)
4 \( \{ \} \)
```

Make sure that the version of <code>I3kernel</code> in use is sufficiently new. We use <code>\ExplFileDate</code> as <code>\@ifpackagelater</code> does not work for pre-loaded <code>expl3</code> in the absence of the package.

```
5 \@ifl@t@r\ExplLoaderFileDate{2020-01-09}
6 {}
7 {%
8  \PackageError{se2colors}{Support package expl3 too old}
9 {%
10  You need to update your installation of the bundles 'l3kernel' and
11  'l3packages'.\MessageBreak
12  Loading~se2colors~will~abort!%
13 }%
14  \endinput
15 }%
```

\IfFormatAtLeastTF

This macro is not present in older kernels, thus we use the LATEX 2_{ε} mechanism as this is correct for this case.

```
<code> 16 \providecommand \IfFormatAtLeastTF { \@ifl@t@r \fmtversion } </code>  (End \ of \ definition \ for \ \ \ \ This \ function \ is \ documented \ on \ page \ 2.)   _{17} \ \ \langle /init \rangle
```

2 The se2thesis implementation

Start the DocStrip guards.

```
18 (*class)
```

Identify the internal prefix (IATEX3 DocStrip convention): only internal material in this submodule should be used directly.

\slcd_package_if_loaded:nTF
\slcd_package_if_loaded:nT
\slcd_package_if_loaded:nF
\slcd_package_if_loaded_p:n

Defines various LATEX3 variants for the internal \@ifpackageloaded macro to check whether a package has been loaded.

```
{ \prg_return_false: }
(End of definition for \slcd_package_if_loaded:nTF and others. These functions are documented on
page 2.)
    Load required packages early.
 29 \RequirePackage{graphicx}
 30 \RequirePackage{translations}
 31 \LoadDictionary{se2translations}
 32 \DeclareTranslationFallback{version-of-date}{%
      Version~\l_slcd_version_tl\ of~\@date
 33
 34 }
 35 \DeclareTranslation{German}{version-of-date}{%
      Version~\l_slcd_version_tl\ vom~\@date
 36
 37 }
 38 \DeclareTranslation{English}{version-of-date}{%
      Version~\l_slcd_version_tl\ of~\@date
 40 }
```

2.1 Define Variables

The following variables are necessary for the argument handling.

\l_slcd_paper_int

A variable to store the key of the page size selected by the user.

```
41 \int_new:N \l__slcd_paper_int (End of definition for \l__slcd_paper_int.)
```

We also need properties to store class options that are not for us, thus shall be handled by the underlying base class.

\l__slcd_base_class_tl
\l__slcd_clsopts_prop
\l slcd unknown clsopts prop

Store the base class, the known, and the unknown class options. The latter will be forwarded to the base class later.

```
42 \tl_new:N \l__slcd_base_class_tl
43 \prop_new:N \l__slcd_clsopts_prop
44 \prop_new:N \l__slcd_unknown_clsopts_prop
```

 $(End\ of\ definition\ for\ \l_slcd_base_class_tl\ ,\ \l_slcd_clsopts_prop\ ,\ and\ \l_slcd_unknown_-clsopts_prop\ .)$

Define internal variables to hold the values of the fields of the title page.

```
\l_slcd_version_tl
\l_slcd_degreeprogramme_tl
                              45 \tl_new:N \l__slcd_version_tl
    \l_slcd_matrnumber_tl
                              46 \tl_new:N \l__slcd_degreeprogramme_tl
     \l_slcd_supervisor_tl
                              47 \tl_new:N \l__slcd_matrnumber_tl
                              48 \tl_new:N \l__slcd_supervisor_tl
   \l slcd cosupervisor tl
                               49 \tl_new:N \l__slcd_cosupervisor_tl
        \l__slcd_advisor_tl
                               \l_slcd_coadvisor_tl
                              _{\mbox{\scriptsize 51}} \tl_new:N \l__slcd_coadvisor_tl
     \l__slcd_department_tl
                               52 \tl_new:N \l__slcd_department_tl
      \l__slcd_institute_tl
                               ^{53} \tl_new:N \l__slcd_institute_tl
      \l_slcd_external_tl
                              54 \tl_new:N \l__slcd_external_tl
      \l_slcd_logofile_tl
                              55 \tl_new:N \l__slcd_logofile_tl
      \l_slcd_signature_tl
                              56 \tl_new:N \l__slcd_signature_tl
       \l_slcd_location_tl
                              57 \tl_new:N \l__slcd_location_tl
```

(End of definition for \l_stcd_version_tl and others.)

Define several dimensions for the typearea package to define the package style.

```
\l_slcd_marginspace_dim
\l_slcd_headmarkspace_dim
\l_slcd_rulespace_dim
\l_slcd_pagemark_minipage_dim
\l_slcd_ruleraise_dim
\l_slcd_ruleraise_dim
\l_slcd_rulewidth_dim
\l_slcd_rulethickness_dim
63 \d
64 \d
65 \d
66 \d
66 \d
```

```
\dim_new:N \l__slcd_marginspace_dim
\dim_new:N \l__slcd_headmarkspace_dim
\dim_new:N \l__slcd_rulespace_dim
\dim_new:N \l__slcd_rulespace_dim
\dim_new:N \l__slcd_pagemark_minipage_dim
\dim_new:N \l__slcd_ruleraise_dim
\dim_new:N \l__slcd_rulewidth_dim
\dim_new:N \l__slcd_rulethickness_dim
\dim_gset:Nn \l__slcd_marginspace_dim { -1.85cm }
\dim_gset:Nn \l__slcd_headmarkspace_dim { 0.75cm }
\dim_gset:Nn \l__slcd_rulespace_dim { 10pt }
\dim_gset:Nn \l__slcd_rulespace_dim { 1.5cm }
\dim_gset:Nn \l__slcd_ruleraise_dim { -5pt }
\dim_gset:Nn \l__slcd_rulewidth_dim { 1.25pt }
\dim_gset:Nn \l__slcd_rulethickness_dim { 15pt }
\dim_gset:Nn \l_slcd_rulethickness_dim { 15pt }
\dim_gset:Nn \l_slcd_rulethickness_dim { 15pt }
\dim_gset:Nn \l_slcd_rulethickness_dim { 15pt }
```

2.2 Load-time options

We define the key-value interface for the class.

```
\l_slcd_base_class_tl
\l_slcd_unknown_clsopts_prop
\l_slcd_paper_int
\l_slcd_thesis_type_tl
\l_slcd_licensetype_tl
\l_slcd_licensemodifier_tl
\l_slcd_licenseversion_tl
\l_slcd_colormode_tl
\l_slcd_fontmode_tl
```

```
72 \keys_define:nn { seiithesis }
73
      class .choice:,
74
      class / report .meta:n = {class=scrreprt},
75
      class / scrreprt .code:n = \tl_gset:Nn \l__slcd_base_class_tl {scrreprt},
76
77
      class / article .meta:n = {class=scrartcl},
      class / scrartcl .code:n = \tl_gset:Nn \l__slcd_base_class_tl {scrartcl},
      class / book .meta:n = {class=scrbook},

 141
              { \KOMAoption{#1}{#2}}
 142
 143
      }
 144
```

2.3 Package loading

We load some packages with options that depend on options to the se2thesis class. Thus, we load them here to be able to hand them over the respective values.

We start with the se2colors and se2fonts packages.

```
145 \PassOptionsToPackage{\l__slcd_colormode_tl}{se2colors}
146 \RequirePackage{se2colors}
147
148 \RequirePackage{se2fonts}
```

2.4 User macros for the title page

In addition to the macros provided by the KOMA-Script classes for the title-page values (e.g. \author, \title), provide these additional macros to the user.

\version Specify the version of the document, e.g., a git hash.

(End of definition for \version. This function is documented on page 3.)

\degreeprogramme

Specify the degree programme the thesis is meant to be accepted in.

(End of definition for \degreeprogramme. This function is documented on page 3.)

\matrnumber

Specify the matriculation number of the student.

(End of definition for $\mbox{\sc matrnumber}$. This function is documented on page 4.)

\supervisor \cosupervisor

Specify the supervisor and co-supervisor of the thesis, usually a professor.

(End of definition for \supervisor and \cosupervisor. These functions are documented on page 4.)

```
Specify the advisor and co-advisor of the thesis, usually a PhD student or postdoc.
   \advisor
 \coadvisor
               169 \ProvideDocumentCommand \advisor { m }
               170
                       \tl_set:Nn \l__slcd_advisor_tl {#1}
               173 \ProvideDocumentCommand \coadvisor { m }
                       \tl_set:Nn \l__slcd_coadvisor_tl {#1}
              (End of definition for \advisor and \coadvisor. These functions are documented on page 4.)
              Specify the university's department and institute you are writing the thesis for.
\department
\institute
               177 \ProvideDocumentCommand \department { m }
               178
                       \tl_set:Nn \l__slcd_department_tl {#1}
               179
               180
               181 \ProvideDocumentCommand \institute { o m }
               182
                       \tl_set:Nn \l__slcd_institute_tl {#2}
               183
              (End of definition for \department and \institute. These functions are documented on page 4.)
  \external Specify an external referee.
               185 \ProvideDocumentCommand \external { m }
                       \tl_set:Nn \l__slcd_external_tl {#1}
               187
              (End of definition for \external. This function is documented on page 4.)
 \location Specify the location for the signature field.
               189 \ProvideDocumentCommand \location { m }
                       \tl_set:Nn \l__slcd_location_tl {#1}
               191
               192
              (End of definition for \location. This function is documented on page 4.)
```

2.5 Define logo, paper size, and paper style

For the logo on the titlepage, we define further variables to store its height and a box to store the logo itself.

```
\l__slcd_logo_height_dim
\l__slcd_logo_box

193 \dim_if_exist:NF \l__slcd_logo_height_dim

194 {

195 \dim_new:N \l__slcd_logo_height_dim

196 \int_compare:nTF { \l__slcd_paper_int=1 }

197 {

198 \dim_gset:Nn \l__slcd_logo_height_dim { 67.5pt }

199 } {

200 \dim_gset:Nn \l__slcd_logo_height_dim { 56.8pt }

201 }
```

```
}
 203 \box_if_exist:NF \l__slcd_logo_box
 204
        \box_new:N \l__slcd_logo_box
 205
 206
    \tl_if_empty:NF \l__slcd_logofile_tl
 207
 208
        \hbox_gset:Nn \l__slcd_logo_box
 209
            \includegraphics[%
 211
              height=\l_slcd_logo_height_dim%
            [\l_slcd_logofile_tl]
(End of definition for \l slcd logo height dim and \l slcd logo box.)
    Set the paper size depending on the selected paper option.
    \int_compare:nTF { \l_slcd_paper_int=1 }
        \areaset[current]{350pt}{567pt}
        \setlength{\marginparsep}{8.5cm}
 219
        \setlength{\marginparsep}{1em}
 220
 221
        \areaset[current]{350pt}{567pt}
        \setlength{\marginparsep}{7.4cm}
 223
        \setlength{\marginparsep}{0.87em}
 224
 225
```

Provide the package style. We start by loading the scrlayer-scrpage package with the appropriate options and set some basic properties.

```
\PassOptionsToPackage{automark}{scrlayer-scrpage}
\RequirePackage{scrlayer-scrpage}
\clearpairofpagestyles
\setkomafont{pagefoot}{\normalfont\sffamily}
```

We can then define the footer for odd pages, which will appear on the right side of the page's footer. This definition contains first, as an optional argument, the style of a page with pagestyle set to empty, i.e., a page where a new chapter starts, and afterwards the style of a regular right-hand side page.

```
230 \rofoot[{%
     \group_begin: \ \group_end:
     \footnotesize%
     \hspace*{\l__slcd_headmarkspace_dim}%
     \group_begin:
       \color{UPSE2-Blue}%
235
       \rule[\l__slcd_ruleraise_dim]{\l__slcd_rulewidth_dim}{\l__slcd_rulethickness_dim}%
236
     \group_end:
     \hspace*{\l__slcd_rulespace_dim}%
238
     \begin{minipage}[b]{\l__slcd_pagemark_minipage_dim}%
239
       \normalsize\textbf{\pagemark}%
240
241
     \end{minipage}%
     \hspace{\l_slcd_marginspace_dim}%
242
243 }]{%
     \group_begin: \ \group_end:
244
     \footnotesize%
245
```

```
246
      \group_begin:
        \color{UPSE2-Blue}\headmark
 247
      \group_end:
 248
      \hspace*{\l_slcd_rulespace_dim}%
 249
      \group_begin:
 250
        \color{UPSE2-Blue}%
 251
        \rule[\l__slcd_ruleraise_dim]{\l__slcd_rulewidth_dim}{\l__slcd_rulethickness_dim}%
 252
      \group_end:
 253
      \hspace*{\l_slcd_rulespace_dim}%
 254
      255
        \normalsize\textbf{\pagemark}%
 256
      \end{minipage}%
 257
      \hspace{\l_slcd_marginspace_dim}%
259 }
    Similarly, we define the footer for even pages, which will appear on the left side of
the page's footer.
 260 \lefoot[{%
      \null\hspace{\l_slcd_marginspace_dim}%
 261
 262
      \footnotesize%
      \begin{minipage}[b]{\l__slcd_pagemark_minipage_dim}%
 263
        \raggedleft\normalsize\textbf{\pagemark}%
 264
      \end{minipage}%
 265
      \footnotesize%
 266
      \hspace*{\l__slcd_rulespace_dim}%
 267
      \group_begin:
        \color{UPSE2-Blue}%
 269
 270
        \rule[\l__slcd_ruleraise_dim]{\l__slcd_rulewidth_dim}{\l__slcd_rulethickness_dim}%
 271
 272 }]{%
      \null\hspace{\l__slcd_marginspace_dim}%
 273
      \footnotesize%
      \begin{minipage}[b]{\l__slcd_pagemark_minipage_dim}%
        \raggedleft\normalsize\textbf{\pagemark}%
 276
      \end{minipage}%
      \footnotesize%
      \hspace*{\l_slcd_rulespace_dim}%
 279
      \group_begin:

```

The next block generates the text that describes the thesis. In case of a PhD thesis, this text is predefined to match the requirements. In case of a bachelor or master thesis, or a proposal thereof, we generate a text based on the values of the thesistype load-time option and the values of the \degreeprogramme, \department, and \institute variables.

2.7 Styling of the sectioning commans

We change the formatting of the chapter, section, and sub-section headings.

```
491 \addtokomafont{chapterprefix}{\raggedleft\bfseries}
492 \addtokomafont{chapter}{\mdseries}
493 \addtokomafont{section}{\large\mdseries}
494 \addtokomafont{subsection}{\normalsize\mdseries}
495 \renewcommand*{\chapterformat}{%
     \enskip\mbox{%
       \scalebox{3}{\color{UPSE2-DarkGray}\thechapter\autodot}%
     }%
498
499 }
500 \renewcommand{\chapterlinesformat}[3]{%
     \parbox[b]{\textwidth}{\hrulefill#2}\par%
501
     #3\par\bigskip%
502
     \hrule%
503
504 }
505 \RedeclareSectionCommand[afterskip=1.5\baselineskip]{chapter}
506 \renewcommand*{\chapterlineswithprefixformat}[3]{%
     \Ifstr{#1}{chapter}
       {#2\textls*[75]{\MakeUppercase{#3}}}% change definition for chapter
       {#2#3}% original definition
509
510 }%
511 \renewcommand*{\sectionlinesformat}[4]{%
     #3\textls*[75]{\MakeUppercase{#4}}%
512
513 }
   Change the loop of a \paragraph to be italic and end with a full stop.
514 \setkomafont{paragraph}{\normalsize\normalfont\itshape}
515 \AddtoDoHook{heading/endgroup/paragraph}{\headingdot}
   \newcommand*{\headingdot}[1]{.}
   Change the width of a dictum
517 \renewcommand*{\dictumwidth}{0.42\linewidth}
```

2.8 Provide an environment for abstracts

We want to allow abstracts in German and English, which is also a requirement when writing a thesis in English. First, ensure that the **\abstract** macro is available for all classes.

\abstract

518 \providecommand{\abstract}{}

(End of definition for \abstract. This function is documented on page 5.)

Then redefine the abstract environment such that it provides an optional argument for language selection.

abstract (env.) Used to typeset an abstract for the thesis. The optional argument allows to specify a language. As a default the current document language will be used.

```
\RenewDocumentEnvironment { abstract } { o }
       \group_begin:
         \IfNoValueF {#1} { \selectlanguage{#1} }
         \scr@ifundefinedorrelax{chapter}{
523
           \Iftocfeature{toc}{leveldown}
             {\subsection*}
             {\section*}
526
         }{
527
           \let\clearpage\relax
           \Iftocfeature{toc}{leveldown}
             {\section*}
530
             {\chapter*}
         } { \GetTranslation{Abstract} }
532
       \group_end:
534
```

2.9 Provide an environment for acknowledgements

Often, especially in a PhD thesis, one wants to acknowledge the help of certain people, for example, supervisors, family, and friends.

acknowledgements (env.) Use to typeset the acknowledgements for the thesis.

```
\NewDocumentEnvironment { acknowledgements } { o }
     {
       \group_begin:
538
         \IfNoValueF {#1} { \selectlanguage{#1} }
539
         \scr@ifundefinedorrelax{chapter}{
540
           \Iftocfeature{toc}{leveldown}
541
             {\subsection*}
542
             {\section*}
543
           \Iftocfeature{toc}{leveldown}
             {\section*}
             {\chapter*}
547
         } { \GetTranslation{Acknowledgements} }
548
     } {
549
       \group_end:
550
     }
551
```

Document structuring macros

Ensure that these macros are defined. These are the exact definitions from KOMA-Script.

552 \newif\if@mainmatter\@mainmattertrue

\frontmatter Starts the frontmatter. Most notably, set the page numbers to roman.

```
553 \providecommand*{\frontmatter}
       \if@twoside\cleardoubleoddpage\else\clearpage\fi
       \@mainmatterfalse
556
557
       \pagenumbering { roman }
558
```

(End of definition for \frontmatter. This function is documented on page 6.)

\backmatter

Starts the mainmatter or the backmatter. Most notably, set the page numbers to arabic.

```
559 \providecommand*{\mainmatter}
560
       \if@twoside\cleardoubleoddpage\else\clearpage\fi
561
562
       \@mainmattertrue
       \pagenumbering { arabic }
563
     }
564
   \providecommand*{\backmatter}
565
566
       \if@twoside\cleardoubleoddpage\else\clearpage\fi
567
568
       \@mainmatterfalse
569
```

(End of definition for \mainmatter and \backmatter. These functions are documented on page 6.)

Declaration of authorship

\authorshipDeclaration Provide a command to typeset the authorship declaration.

```
570 \NewDocumentCommand \authorshipDeclaration { o }
572
       \par
       \group_begin:
         \selectlanguage{ngerman}
574
         \IfNoValueF {#1}
           { \tl_gset:Nn \l__slcd_location_tl {#1} }
         \tl_if_empty:NT \l__slcd_location_tl
           {
             \msg_new:nnn { seiithesis }
580
               { no-location-specified }
581
582
                 You~ need~ to~ specify~ a~ location~ for~ the~ authorship~
                 declaration.~ Either~ via~ the~ location~ macro~ or~ via~ the~
                 optional~ argument~ of~ the~ authorshipDeclaration~ macro.
             \msg_warning:nn { seiithesis } { no-location-specified }
587
588
589
         \scr@ifundefinedorrelax{chapter}{
590
```

```
\Iftocfeature{toc}{leveldown}
                 591

```

2.12 Research questions and summary boxes

We utilise the ntheorem package for defining new theorem environments that are used for defining research questions and hypotheses. Therefore, start with loading this package. ntheorem.

resq (env.) We can then define the resq and hyp environments using the \newtheorem macro from hyp (env.) ntheorem.

```
629 \newtheorem{resq}{Research~ Question}
630 \newtheorem{hyp}{Hypothesis}
```

For the summary boxes, we utilise the tcolorbox package. We start with loading this package.

631 \RequirePackage{tcolorbox}

summary (env.) The summary environment expects a label and has the summary text in its content.

5 **se2fonts** implementation

Start the DocStrip guards.

```
819 (*package)
```

Identify the internal prefix (IAT_EX3 DocStrip convention): only internal material in this *submodule* should be used directly.

```
820 (00=slcd_fonts)
```

Identify the package and give the overall version information.

- 821 \ProvidesExplPackage {se2fonts} {2023-07-04} {3.1.0}
- {A font-selection support package for the se2thesis bundle}

5.1 Load-time options

\l__slcd_fonts_fontmode_tl

Holds the font-selection mode specified by the user as a package load-time option. *Please note:* this option is deprecated!

```
823 \tl_new:N \l__slcd_fonts_fontmode_tl
    \keys_define:nn { seiifonts }
 826
        fmode .choice:,
        fmode / original .code:n = {
 827
          \tl_gset:Nn \l__slcd_fonts_fontmode_tl {original}
 828
        },
 829
        fmode / replacement .code:n = {
 830
          \tl_gset:Nn \l__slcd_fonts_fontmode_tl {replacement}
 831
 832
        fmode / auto .code:n = {
 833
          \tl_gset:Nn \l__slcd_fonts_fontmode_tl {auto}
        original .meta:n = {fmode=original},
 836
        replacement .meta:n = {fmode=replacement},
 837
        auto .meta:n = {fmode=auto},
 838
      }
 839
(End\ of\ definition\ for\ \l_slcd_fonts\_fontmode\_tl.)
```

5.2 Option handling

```
\IfFormatAtLeastTF { 2022-06-01 }
841
     { \ProcessKeyOptions [ seiifonts ] }
842
       \RequirePackage{ 13keys2e }
844
       \ProcessKeysOptions { seiifonts }
845
   Define a warning message
846 \msg_set:nnnn { seiifonts } { deprecated-option }
    { The~ option~ fmode~ to~ the~ se2fonts~ package~ is~ deprecated. }
    { Remove~ it~ from~ your~ code.}
   Raise the warning if the option was used
  \tl_if_empty:NF \l__slcd_fonts_fontmode_tl
    {
850
       \msg_warning:nn { seiifonts } { deprecated-option }
851
```

852 }

5.3 Helper macros

\pdftexengine
\xetexengine
\luatexengine

We define several alias macros to identify which engine the user is running.

```
%53 \cs_new_eq:NN \pdftexengine \sys_if_engine_pdftex_p:
%54 \cs_new_eq:NN \xetexengine \sys_if_engine_xetex_p:
%55 \cs_new_eq:NN \luatexengine \sys_if_engine_luatex_p:
```

(End of definition for \pdftexengine, \xetexengine, and \luatexengine. These functions are documented on page 10.)

\ifengineTF \ifengineT \ifengineF True, if the engine used matches the given first argument.

```
\NewExpandableDocumentCommand \ifengineTF { mmm }
857
     {
858
       \bool_if:nTF { #1 } { #2 } { #3 }
859
     }
   \NewExpandableDocumentCommand \ifengineT { mm }
860
     {
861
       \bool_if:nT { #1 } { #2 }
862
863
   \NewExpandableDocumentCommand \ifengineF { mm }
864
865
       \bool_if:nF { #1 } { #2 }
866
```

(End of definition for \ifengineTF, \ifengineT, and \ifengineF. These functions are documented on page 10.)

The package is not tested with X_HT_EX, thus we provide an error to the user and stop the execution if they want to use the package with X_HT_EX.

5.4 Font loading

Depending on the engine used by the user, we can use fontspec for loading fonts.

```
875 \ifengineTF { \luatexengine }
876 {
```

If the user uses LuaT_FX, load fontspec and unicode-math.

```
RequirePackage{fontspec}
RequirePackage{unicode-math}
```

To make sure the scaling of the fonts matches, we let fontspec do this matching based on the lower-case characters.

```
\defaultfontfeatures{ Scale = MatchLowercase }
\defaultfontfeatures[\rmfamily]{ Scale = 1 }
```

Load the respective libertinus-off package and omit the monospaced font.

```
NassOptionsToPackage{mono=false}{libertinus-otf}
RequirePackage{libertinus-otf}
```

```
Load the Anonymous\ Pro monospaced font.
```

```
\setmonofont{AnonymousPro}[
883
         RawFeature
                        = {+tnum, +lnum},
884
                         = {MatchLowercase},
         Scale
885
         FakeStretch
                         = \{0.9\},
886
887
         UprightFont
                         = *-Regular,
888
         ItalicFont
                         = *-Italic,
                         = *-Italic,
889
         {\tt SlantedFont}
                         = *-Bold,
         BoldFont
         BoldItalicFont = *-BoldItalic,
                         = .ttf,
         Extension
       ]
893
    } {
894
   The user does not use LuaT_EX, thus fallback to T1 fonts.
       \PassOptionsToPackage{T1}{fontenc}
895
       \PassOptionsToPackage{scale=0.85}{AnonymousPro}
896
       \PassOptionsToPackage{mono=false}{libertinus-type1}
897
       \RequirePackage{fontenc}
       \RequirePackage{AnonymousPro}
       \RequirePackage{libertinus-type1}
901
902 </package>
```

se2packages implementation

Start the DocStrip guards.

903 (*package)

Identify the internal prefix (IATEX3 DocStrip convention): only internal material in this *submodule* should be used directly.

904 (@@=slcd_packages)

Identify the package and give the overall version information.

- \ProvidesExplPackage {se2packages} {2023-07-04} {3.1.0}
- {Supporting packages for the se2thesis bundle}

6.1Load-time options

Before we define the actual options, define some Boolean variables to store the selected values.

\l_slcd_packages_csquotes_bool

Whether or not to load csquotes.

907 \bool_new:N \l__slcd_packages_csquotes_bool

\l slcd packages booktabs bool

Whether or not to load booktabs.

908 \bool_new:N \l__slcd_packages_booktabs_bool

 $(End\ of\ definition\ for\ \l_slcd_packages_booktabs_bool.)$

\l slcd packages siunitx bool

Whether or not to load and configure siunitx.

909 \bool_new:N \l__slcd_packages_siunitx_bool

 $(End\ of\ definition\ for\ \l_slcd_packages_siunitx_bool.)$

\l slcd packages minted bool

Whether or not to load and configure minted.

910 \bool_new:N \l__slcd_packages_minted_bool

 $(End\ of\ definition\ for\ \l_slcd_packages_minted_bool.)$

\l slcd packages listings bool Whether or not to load and configure listings.

911 \bool_new:N \l__slcd_packages_listings_bool

 $(End\ of\ definition\ for\ \l_slcd_packages_listings_bool.)$

\l slcd packages biblatex bool

Whether or not to load and configure biblatex.

912 \bool_new:N \l__slcd_packages_biblatex_bool

 $(End\ of\ definition\ for\ \verb|\l_slcd_packages_biblatex_bool.|)$

\l slcd packages selnolig bool

Whether or not to load selnolig (LuaT_FX only).

913 \bool_new:N \l__slcd_packages_selnolig_bool

\l slcd packages luawidowcontrol bool

Whether or not to load luawidowcontrol (LuaT_EX only).

914 \bool_new:N \l__slcd_packages_luawidowcontrol_bool

```
(End\ of\ definition\ for\ \verb|\l_slcd_packages_luawidowcontrol_bool.)
     \l slcd packages microtype bool
                               Whether or not to load microtype.
                                915 \bool_new:N \l__slcd_packages_microtype_bool
                               (End\ of\ definition\ for\ \verb|\l_slcd_packages_microtype_bool.|)
                              Whether or not to load and configure cleveref.
     \l slcd packages cleveref bool
                                916 \bool_new:N \l__slcd_packages_cleveref_bool
                               (End\ of\ definition\ for\ \l_slcd_packages\_cleveref\_bool.)
                              Whether or not to load and configure all recommended packages.
\l_slcd_packages_all_bool
                                917 \bool_new:N \l__slcd_packages_all_bool
                               (End\ of\ definition\ for\ \l_slcd_packages_all_bool.)
                                    Define the actual load-time options.
                                918 \keys_define:nn { seiipackages }
